Global Study Shows Half Think That Religion Does More Harm than Good

Half (49%) in a new global study agree that religion does more harm than good in the world, and 51% disagree, according to new data from Ipsos Global @dvisor survey.

12 October 2017 Religion

 DOWNLOAD

The survey, conducted among online adults aged under 65 in 23 countries world-wide, finds people split on their views about religion's impact on the world. Countries which are most likely to believe that religion does more harm than good tend to be in Western Europe

Religion
=
Wish Fulfillment?

**At bottom God
is nothing more
than an exalted father.**

~ Sigmund Freud

Factors associated with happiness:
country comparisons

- Divorce rate
- Unemployment rate
- Fraction members of community organisations
- Quality of government
- Fraction belief in God

Bonelli and Koenig (2013)

Evidence for health benefits of religion

- depression, suicide, substance mis-use
- Anxiety disorders and dementias
- Psychosis and bipolar disorders

“Most studies have shown that religious involvement and spirituality are associated with better health outcomes, including greater longevity, coping skills, and health-related quality of life (even during terminal illness) and less anxiety, depression, and suicide. Several studies have shown that addressing the spiritual needs of the patient may enhance recovery from illness.”

Mueller et al, 2001

Factors That Determine Our Happiness

Lyubomirsky, Sheldon & Schkade (2005)

Intentional activities

- Community and social networks
- Acts of kindness
- Marriage and stable families
- `Decentering' spiritual practices
 - Worship (communal and orientated to transcendent)
 - Gratitude
 - Awe

Fundamentalist religion and its effect on mental health

Abstract

The national self-help group, Fundamentalists Anonymous (F.A.), has focused attention upon mental problems that may be caused or exacerbated by authoritarian religion. In this article we outline assertions about the mental problems caused by membership in fundamentalist religion, illustrate these with two case histories, briefly discuss intervention strategies, and describe conceptual and empirical issues. While former members have presented problems severe enough to warrant professional treatment, a causal link between their symptoms and their religious membership has not yet been established, because there is little empirical work on the subject.
